

LinearSVC ANOVA-F Feature Selection Report

Complete frequency ranking of every feature selected at least once across 50 outer patient splits

50 outer splits	1 classifier	18 trained task groups	Complete selected-feature ranking
60 train / 26 test	LinearSVC	Original + applicable Mask	3816 task-specific rows

Interpretation

- Every table contains all features that entered this classifier at least once for the stated network, feature mode and variant; no top-10 truncation is applied.
- Selection count ranges from 1 to 50 and represents outer splits, not patients. Frequency rank is ordered by selection count, then median ANOVA rank, then feature name.
- ANOVA-F is calculated from outer-training patients only. P values are descriptive and uncorrected; $P < 0.05$ is not required because the implemented rule retains the first K ranked features.
- VN has no applicable Mask prior, so its Mask rows reuse Original and are not duplicated in the PDF. The JSON keeps explicit fallback references and every split-level selection.

Knowledge-guided rules

WB/DMN topology priors (WB: SmallWorld/aSigma.txt; DMN: Synchronization/as.txt) are guaranteed within top-K. SMN Mask appends the 13-edge NBS weighted composite after ANOVA top-K.

VN - FC - Original

Complete ranking of 66 features selected at least once in 50 outer splits.

591	FC edge: node 25 - node 27	1	2.0%	188	3.016	0.088

FC node numbers are 1-based local positions in the corresponding network matrix. Median rank, mean F and median P are calculated across splits in which the feature was selected.

WB - Topology - Original

Complete ranking of 478 features selected at least once in 50 outer splits.

Median K		Range	K counts across 50 splits		Selected feature union		
250		150-250	150x5, 175x3, 200x6, 225x6, 250x30		478		
Frequency rank	Feature		Selected / 50	Rate	Median ANOVA rank	Mean F	Median P

FC node numbers are 1-based local positions in the corresponding network matrix. Median rank, mean F and median P are calculated across splits in which the feature was selected.

WB - Topology - Mask

Complete ranking of 472 features selected at least once in 50 outer splits.

Median K		Range	K counts across 50 splits		Selected feature union		
250		150-250	150x4, 175x4, 200x5, 225x11, 250x26		472

FC node numbers are 1-based local positions in the corresponding network matrix. Median rank, mean F and median P are calculated across splits in which the feature was selected.

WB - FC + Topology - Original

Complete ranking of 580 features selected at least once in 50 outer splits.

Median K	Range	K counts across 50 splits			Selected feature union		
150	112-188	112x16, 131x3, 150x7, 169x10, 188x14			580

FC node numbers are 1-based local positions in the corresponding network matrix. Median rank, mean F and median P are calculated across splits in which the feature was selected.

WB - FC + Topology - Mask

Complete ranking of 727 features selected at least once in 50 outer splits.

Median K	Range	K counts across 50 splits			Selected feature union		
200	150-250	150x15, 175x7, 200x11, 225x5, 250x12			727

FC node numbers are 1-based local positions in the corresponding network matrix. Median rank, mean F and median P are calculated across splits in which the feature was selected.

DMN - FC - Original

Complete ranking of 153 features selected at least once in 50 outer splits.

Median K	Range	K counts across 50 splits	Selected feature union
112	75-125	75x9, 88x1, 100x7, 112x12, 125x21	153

FC node numbers are 1-based local positions in the corresponding network matrix. Median rank, mean F and median P are calculated across splits in which the feature was selected.

DMN - FC + Topology - Original

Complete ranking of 271 features selected at least once in 50 outer splits.

Median K	Range	K counts across 50 splits	Selected feature union
200	150-250	150x16, 175x7, 200x9, 225x8, 250x10	271

FC node numbers are 1-based local positions in the corresponding network matrix. Median rank, mean F and median P are calculated across splits in which the feature was selected.

DMN - FC + Topology - Mask

Complete ranking of 221 features selected at least once in 50 outer splits.

Median K		Range	K counts across 50 splits			Selected feature union	
100		75-125	75x14, 88x8, 100x8, 112x9, 125x11			221

FC node numbers are 1-based local positions in the corresponding network matrix. Median rank, mean F and median P are calculated across splits in which the feature was selected.

SMN - FC - Original

Complete ranking of 8 features selected at least once in 50 outer splits.

Median K	Range	K counts across 50 splits			Selected feature union		
4	2-4	2x11, 3x10, 4x29			8

8	NodalClustCoeff/aNCp.txt [node 03]	1	2.0%	3	6.016	0.017

FC node numbers are 1-based local positions in the corresponding network matrix. Median rank, mean F and median P are calculated across splits in which the feature was selected.

Reproducibility note

This report reconstructs feature sets from the saved model-specific K values, original data and predefined patient splits. The classifier was not refitted, and existing predictions and performance metrics were not modified.

Item	Value
Model	LinearSVC
Split-level selection records	1200
Unique split/network/mode rankings	600
Ranked task groups	18
Classifiers refitted	No
Existing metrics modified	No

RF ANOVA-F Feature Selection Report

Complete frequency ranking of every feature selected at least once across 50 outer patient splits

50 outer splits	1 classifier	18 trained task groups	Complete selected-feature ranking
60 train / 26 test	RF	Original + applicable Mask	3597 task-specific rows

Interpretation

- Every table contains all features that entered this classifier at least once for the stated network, feature mode and variant; no top-10 truncation is applied.
- Selection count ranges from 1 to 50 and represents outer splits, not patients. Frequency rank is ordered by selection count, then median ANOVA rank, then feature name.
- ANOVA-F is calculated from outer-training patients only. P values are descriptive and uncorrected; $P < 0.05$ is not required because the implemented rule retains the first K ranked features.
- VN has no applicable Mask prior, so its Mask rows reuse Original and are not duplicated in the PDF. The JSON keeps explicit fallback references and every split-level selection.

Knowledge-guided rules

WB/DMN topology priors (WB: SmallWorld/aSigma.txt; DMN: Synchronization/as.txt) are guaranteed within top-K. SMN Mask appends the 13-edge NBS weighted composite after ANOVA top-K.

VN - FC - Original

Complete ranking of 63 features selected at least once in 50 outer splits.

FC node numbers are 1-based local positions in the corresponding network matrix. Median rank, mean F and median P are calculated across splits in which the feature was selected.

WB - FC - Original

Complete ranking of 510 features selected at least once in 50 outer splits.

Median K	Range	K counts across 50 splits			Selected feature union		
131	112-188	112x24, 131x9, 150x5, 169x9, 188x3			510

FC node numbers are 1-based local positions in the corresponding network matrix. Median rank, mean F and median P are calculated across splits in which the feature was selected.

WB - Topology - Original

Complete ranking of 435 features selected at least once in 50 outer splits.

Median K	Range	K counts across 50 splits	Selected feature union
175	150-250	150x15, 175x12, 200x8, 225x10, 250x5	435

FC node numbers are 1-based local positions in the corresponding network matrix. Median rank, mean F and median P are calculated across splits in which the feature was selected.

WB - Topology - Mask

Complete ranking of 433 features selected at least once in 50 outer splits.

Median K		Range	K counts across 50 splits		Selected feature union		
187.5		150-250	150x14, 175x11, 200x11, 225x9, 250x5		433

FC node numbers are 1-based local positions in the corresponding network matrix. Median rank, mean F and median P are calculated across splits in which the feature was selected.

WB - FC + Topology - Original

Complete ranking of 553 features selected at least once in 50 outer splits.

Median K	Range	K counts across 50 splits			Selected feature union		
131	112-188	112x20, 131x11, 150x6, 169x8, 188x5			553

FC node numbers are 1-based local positions in the corresponding network matrix. Median rank, mean F and median P are calculated across splits in which the feature was selected.

WB - FC + Topology - Mask

Complete ranking of 713 features selected at least once in 50 outer splits.

Median K	Range	K counts across 50 splits			Selected feature union		
175	150-250	150x16, 175x14, 200x10, 225x5, 250x5			713		

Frequency rank	Feature	Selected / 50	Rate	Median ANOVA rank	Mean F	Median P

FC node numbers are 1-based local positions in the corresponding network matrix. Median rank, mean F and median P are calculated across splits in which the feature was selected.

DMN - FC - Original

Complete ranking of 153 features selected at least once in 50 outer splits.

Median K	Range	K counts across 50 splits	Selected feature union
112	75-125	75x2, 88x6, 100x6, 112x16, 125x20	153

Frequency rank	Feature	Selected / 50	Rate	Median ANOVA rank	Mean F	Median P
1	FC edge: node 10 - node 14	50	100.0%	1	5.647	0.020

FC node numbers are 1-based local positions in the corresponding network matrix. Median rank, mean F and median P are calculated across splits in which the feature was selected.

DMN - Topology - Original

Complete ranking of 51 features selected at least once in 50 outer splits.

FC node numbers are 1-based local positions in the corresponding network matrix. Median rank, mean F and median P are calculated across splits in which the feature was selected.

DMN - FC + Topology - Original

Complete ranking of 271 features selected at least once in 50 outer splits.

Median K	Range	K counts across 50 splits	Selected feature union
225	150-250	150x5, 175x2, 200x9, 225x13, 250x21	271

FC node numbers are 1-based local positions in the corresponding network matrix. Median rank, mean F and median P are calculated across splits in which the feature was selected.

DMN - FC + Topology - Mask

Complete ranking of 226 features selected at least once in 50 outer splits.

Median K		Range	K counts across 50 splits			Selected feature union	
112		75-125	75x10, 88x8, 100x6, 112x13, 125x13			226

9	SmallWorld/aGamma	1	2.0%	4	4.752	0.033

FC node numbers are 1-based local positions in the corresponding network matrix. Median rank, mean F and median P are calculated across splits in which the feature was selected.

Reproducibility note

This report reconstructs feature sets from the saved model-specific K values, original data and predefined patient splits. The classifier was not refitted, and existing predictions and performance metrics were not modified.

Item	Value
Model	RF
Split-level selection records	1200
Unique split/network/mode rankings	600
Ranked task groups	18
Classifiers refitted	No
Existing metrics modified	No

LDA ANOVA-F Feature Selection Report

Complete frequency ranking of every feature selected at least once across 50 outer patient splits

50 outer splits	1 classifier	18 trained task groups	Complete selected-feature ranking
60 train / 26 test	LDA	Original + applicable Mask	3829 task-specific rows

Interpretation

- Every table contains all features that entered this classifier at least once for the stated network, feature mode and variant; no top-10 truncation is applied.
- Selection count ranges from 1 to 50 and represents outer splits, not patients. Frequency rank is ordered by selection count, then median ANOVA rank, then feature name.
- ANOVA-F is calculated from outer-training patients only. P values are descriptive and uncorrected; $P < 0.05$ is not required because the implemented rule retains the first K ranked features.
- VN has no applicable Mask prior, so its Mask rows reuse Original and are not duplicated in the PDF. The JSON keeps explicit fallback references and every split-level selection.

Knowledge-guided rules

WB/DMN topology priors (WB: SmallWorld/aSigma.txt; DMN: Synchronization/as.txt) are guaranteed within top-K. SMN Mask appends the 13-edge NBS weighted composite after ANOVA top-K.

VN - FC - Original

Complete ranking of 63 features selected at least once in 50 outer splits.

FC node numbers are 1-based local positions in the corresponding network matrix. Median rank, mean F and median P are calculated across splits in which the feature was selected.

VN - FC + Topology - Original

Complete ranking of 56 features selected at least once in 50 outer splits.

Median K	Range	K counts across 50 splits	Selected feature union

FC node numbers are 1-based local positions in the corresponding network matrix. Median rank, mean F and median P are calculated across splits in which the feature was selected.

WB - Topology - Original

Complete ranking of 477 features selected at least once in 50 outer splits.

Median K	Range	K counts across 50 splits	Selected feature union
237.5	150-250	150x5, 175x4, 200x7, 225x9, 250x25	477

FC node numbers are 1-based local positions in the corresponding network matrix. Median rank, mean F and median P are calculated across splits in which the feature was selected.

WB - Topology - Mask

Complete ranking of 478 features selected at least once in 50 outer splits.

Median K	Range	K counts across 50 splits	Selected feature union
225	150-250	150x6, 175x5, 200x7, 225x9, 250x23	478

FC node numbers are 1-based local positions in the corresponding network matrix. Median rank, mean F and median P are calculated across splits in which the feature was selected.

WB - FC + Topology - Original

Complete ranking of 581 features selected at least once in 50 outer splits.

Median K	Range	K counts across 50 splits	Selected feature union
150	112-188	112x15, 131x7, 150x8, 169x8, 188x12	581

Frequency rank	Feature	Selected / 50	Rate	Median ANOVA rank	Mean F	Median P
1	FC edge: node 76 - node 86	50	100.0%	1	14.682	0.000

FC node numbers are 1-based local positions in the corresponding network matrix. Median rank, mean F and median P are calculated across splits in which the feature was selected.

WB - FC + Topology - Mask

Complete ranking of 765 features selected at least once in 50 outer splits.

Median K	Range	K counts across 50 splits	Selected feature union
200	150-250	150x13, 175x11, 200x3, 225x6, 250x17	765

FC node numbers are 1-based local positions in the corresponding network matrix. Median rank, mean F and median P are calculated across splits in which the feature was selected.

DMN - FC - Original

Complete ranking of 153 features selected at least once in 50 outer splits.

Median K	Range	K counts across 50 splits			Selected feature union		
100	75-125	75x17, 88x5, 100x5, 112x8, 125x15			153		

Frequency rank	Feature	Selected / 50	Rate	Median ANOVA rank	Mean F	Median P

FC node numbers are 1-based local positions in the corresponding network matrix. Median rank, mean F and median P are calculated across splits in which the feature was selected.

DMN - FC + Topology - Mask

Complete ranking of 227 features selected at least once in 50 outer splits.

Median K		Range	K counts across 50 splits			Selected feature union	
100		75-125	75x14, 88x8, 100x6, 112x9, 125x13			227

9	SmallWorld/aGamma	1	2.0%	4	4.752	0.033

FC node numbers are 1-based local positions in the corresponding network matrix. Median rank, mean F and median P are calculated across splits in which the feature was selected.

Reproducibility note

This report reconstructs feature sets from the saved model-specific K values, original data and predefined patient splits. The classifier was not refitted, and existing predictions and performance metrics were not modified.

Item	Value
Model	LDA
Split-level selection records	1200
Unique split/network/mode rankings	600
Ranked task groups	18
Classifiers refitted	No
Existing metrics modified	No

DT ANOVA-F Feature Selection Report

Complete frequency ranking of every feature selected at least once across 50 outer patient splits

50 outer splits	1 classifier	18 trained task groups	Complete selected-feature ranking
60 train / 26 test	DT	Original + applicable Mask	3764 task-specific rows

Interpretation

- Every table contains all features that entered this classifier at least once for the stated network, feature mode and variant; no top-10 truncation is applied.
- Selection count ranges from 1 to 50 and represents outer splits, not patients. Frequency rank is ordered by selection count, then median ANOVA rank, then feature name.
- ANOVA-F is calculated from outer-training patients only. P values are descriptive and uncorrected; $P < 0.05$ is not required because the implemented rule retains the first K ranked features.
- VN has no applicable Mask prior, so its Mask rows reuse Original and are not duplicated in the PDF. The JSON keeps explicit fallback references and every split-level selection.

Knowledge-guided rules

WB/DMN topology priors (WB: SmallWorld/aSigma.txt; DMN: Synchronization/as.txt) are guaranteed within top-K. SMN Mask appends the 13-edge NBS weighted composite after ANOVA top-K.

VN - FC - Original

Complete ranking of 63 features selected at least once in 50 outer splits.

FC node numbers are 1-based local positions in the corresponding network matrix. Median rank, mean F and median P are calculated across splits in which the feature was selected.

WB - Topology - Original

Complete ranking of 463 features selected at least once in 50 outer splits.

Median K	Range	K counts across 50 splits	Selected feature union
212.5	150-250	150x6, 175x8, 200x11, 225x12, 250x13	463

FC node numbers are 1-based local positions in the corresponding network matrix. Median rank, mean F and median P are calculated across splits in which the feature was selected.

WB - Topology - Mask

Complete ranking of 463 features selected at least once in 50 outer splits.

Median K		Range	K counts across 50 splits		Selected feature union		
212.5		150-250	150x7, 175x8, 200x10, 225x11, 250x14		463

FC node numbers are 1-based local positions in the corresponding network matrix. Median rank, mean F and median P are calculated across splits in which the feature was selected.

WB - FC + Topology - Original

Complete ranking of 581 features selected at least once in 50 outer splits.

Median K	Range	K counts across 50 splits	Selected feature union
150	112-188	112x14, 131x7, 150x5, 169x13, 188x11	581

FC node numbers are 1-based local positions in the corresponding network matrix. Median rank, mean F and median P are calculated across splits in which the feature was selected.

WB - FC + Topology - Mask

Complete ranking of 735 features selected at least once in 50 outer splits.

Median K	Range	K counts across 50 splits			Selected feature union		
200	150-250	150x9, 175x8, 200x12, 225x8, 250x13			735

FC node numbers are 1-based local positions in the corresponding network matrix. Median rank, mean F and median P are calculated across splits in which the feature was selected.

DMN - FC - Original

Complete ranking of 153 features selected at least once in 50 outer splits.

Median K	Range	K counts across 50 splits			Selected feature union		
100	75-125	75x10, 88x8, 100x9, 112x13, 125x10			153		

Frequency rank	Feature	Selected / 50	Rate	Median ANOVA rank	Mean F	Median P

FC node numbers are 1-based local positions in the corresponding network matrix. Median rank, mean F and median P are calculated across splits in which the feature was selected.

DMN - FC + Topology - Mask

Complete ranking of 233 features selected at least once in 50 outer splits.

Median K	Range	K counts across 50 splits			Selected feature union		
112	75-125	75x7, 88x10, 100x7, 112x14, 125x12			233

FC node numbers are 1-based local positions in the corresponding network matrix. Median rank, mean F and median P are calculated across splits in which the feature was selected.

SMN - FC - Original

Complete ranking of 6 features selected at least once in 50 outer splits.

Median K	Range	K counts across 50 splits	Selected feature union
2.5	2-4	2x25, 3x14, 4x11	6

Frequency rank	Feature	Selected / 50	Rate	Median ANOVA rank	Mean F	Median P

FC node numbers are 1-based local positions in the corresponding network matrix. Median rank, mean F and median P are calculated across splits in which the feature was selected.

Reproducibility note

This report reconstructs feature sets from the saved model-specific K values, original data and predefined patient splits. The classifier was not refitted, and existing predictions and performance metrics were not modified.
